CASH RECEIPTS FROM FARMING IN OHIO
1962

Cash receipts from marketings and government payments for Ohio totaled \$1,098,342,000 in 1962, up \$9,316,000 or about one percent from the revised estimate of 1961 cash receipts. Higher receipts from farm marketings accounted for the increase, offset slightly by a decline in government payments from \$60,439,000 in 1961 to \$59,520,000 in 1962.

Excluding government payments cash receipts from all farm marketings in 1962 totaled \$1,038,822,000. Cash receipts from livestock and livestock products marketed increased less than one percent over 1961 for a total of \$634,411,000. Cash receipts from crops totaled \$404,411,000, up 2.3 percent from the 1961 comparable total.

Higher cash income from crops in 1962 is due largely to a 5.5 percent increase in cash receipts from soybeans which constituted about one-fourth of the total for all crops.

Most of the increase in livestock cash receipts can be attributed to marketings of meat animals which amounted to \$321,022,000 or just over half of the total cash receipts from livestock and livestock products. The value of all meat animals marketed was up 1.8 percent from the previous year, with the following increases in individual receipts: cattle and calves, up 2.4 percent; hogs, up 0.9 percent; and sheep and lambs up 6.4 percent. A 2.5 percent decrease in cash receipts from dairy products nearly offset the increase in meat animals, leaving the total cash income from livestock products just slightly above the previous year.

The three most important enterprises as sources of cash receipts to Ohio farmers accounted for 50.6 percent of the total cash receipts. Dairy products accounted for 20.7 percent, followed by cattle and calves at 15.4 percent. Hogs were a close third in importance with 14.5 percent of the total cash receipts.

Fulton, Darke, Wood, and Wayne are the four leading counties in total cash income in 1962 with each exceeding \$25,000,000. Leaders in sales for major enterprises were: Wayne in dairy products; Fulton in cattle and calves; and Clinton in hogs.

These estimates of cash income should not be confused with gross farm income, which includes other agricultural income such as the value of home consumption. Neither should they be confused with net farm income, which makes an allowance for farm production expenses.

ESTIMATED CASH RECEIPTS BY OHIO FARMERS FROM THE SALE OF
AGRICULTURAL PRODUCTS AND FROM GOVERNMENT PAYMENTS
BY COUNTIES - 1962

Explanations

The purpose of this study is to estimate the 1962 cash receipts from farm marketings for each of the 88 counties in Ohio. Cash receipts, in this study, denotes the actual cash receipts from the sale of agricultural commodities in the county; however, inter-farm sales of livestock, the value of crops used for feed, seed and household use, and income from outside work or investments are excluded. Therefore, the data do not necessarily indicate the relative importance of the various enterprises, but rather their importance as sources of cash receipts. These estimates of cash receipts should not in any way be confused with the net income of Ohio farmers.

Similar estimates of cash receipts by Ohio farmers have been made for 1927 and for each year since 1929. The results have been published in mimeograph bulletins of the Department of Agricultural Economics, The Ohio State University and the Ohio Agricultural Experiment Station in cooperation with the Statistical Reporting Service of the U. S. Department of Agriculture.

All cash receipt figures were calculated for the calendar year as in the previous studies since 1939. State totals of cash receipts were prepared by the Economic Research Service, USDA. Other data used as a basis for the study were obtained from the Ohio Crop Reporting Service, and from the 1959 census of Agriculture. Certain changes of methods of calculation become necessary year to year due to changes in basic sources of information; therefore, figures for some items are not strictly comparable with former years. However, a fair picture of the sources of agricultural cash receipts and their relative importance is given by this study.

State total cash receipts from sales are the same as those published in the August 1963 USDA Farm Income Bulletin. Total cash receipts from sales are shown in Tables I, II, V, VI, and VII. Table III presents the relative importance of main agricultural commodities as a source of cash receipts in Ohio counties. Cash receipts from the sale of cull dairy cows and veal calves were added to the dairy enterprise in early years, but, since the 1957 study, they are included in cash receipts from cattle and calves. The 1962 cash receipts from the sale of cull dairy cows and veal calves have been estimated at \$32,148,000. The cost of feeder cattle purchased was not deducted from cattle sales. The poultry enterprise includes the cash receipts from eggs, farm chickens, commercial broilers, and turkeys. The sheep enterprise includes receipts from sheep, lambs and wool, and, as in the case

of cattle, a deduction for the cost of feeder sheep and lambs purchased was not made from sales. The fruit crop enterprise includes cash receipts from small fruits as well as from tree fruits and nuts. The vegetable crop enterprise includes canning crops and all vegetables grown for fresh market sales except potatoes which were estimated separately. Greenhouse production of vegetables is included in vegetable sales; prior to 1960, cash receipts from greenhouse vegetables were included with greenhouse and nursery products.

Cash receipts from vegetables and from greenhouse and nurseries by counties for 1962 are not strictly comparable with previous years. In 1961, greenhouse vegetables were included in the state total of cash receipts from vegetables rather than greenhouse and nursery. However, the distribution of vegetable cash receipts to counties was based on the sales of all field grown vegetables by counties. Beginning with 1962, cash receipts from the greenhouse portion of lettuce, cucumber and tomato production were estimated by counties using 1959 census value of sales of vegetables grown under glass. This was added to cash receipts from field grown vegetables to arrive at total cash receipts from vegetables.

Total government payments made during 1962 amounted to \$59,520,000, which was only 5.4 percent of total cash receipts. The Feed Grain Program made up the major portion of total government payments during 1962 at \$37,013,000 or 62 percent of the total; Soil Bank payments amounted to \$8,181,000 or 14 percent; and Conservation Practices were \$6,140,000 or 10 percent. Wool Payments, Sugar Beet Payments, and Wheat Program Payments amounted to \$1,716,000, \$704,000 and \$5,766,000 respectively. The authors are very grateful to the personnel of the Ohio Agricultural Stabilization and Conservation Service who furnished data on government payments by counties.

Since a great variation exists in the size of the counties in Ohio, the estimated cash receipts per farm and per acre have been calculated, using the 1959 U. S. Census number of farms and acres of all land in farms, to serve as a basis for comparing the counties. These county figures are in Table V. The low cash receipts per acre in some counties is due in part to the fact that the acreage designated by the Census as acres of all land in farms includes a considerable amount of land not actually cultivated and some not even used for pasture. The Census definition of a farm was changed between 1954 and 1959. For 1959, each place operated as a unit of 10 or more acres, as well as each place operated as a unit of less than 10 acres from which the sale of agricultural products totaled \$250 or more in 1959 was counted as a farm.

In this study only the sale of farm commodities is used in estimating cash receipts to Ohio farmers. The relative importance for some commodities would be rated differently if we include the value of the commodities used on the farm. The value of corn, oats, and hay used on farms where produced during 1962 in Ohio have been estimated at 131 million dollars for corn, 19 million dollars for oats, and 85 million dollars for hay.

TABLE I

CASH RECEIPTS FROM FARMING AND GOVERNMENT PAYMENTS, OHIO, 1924 - 1962

Year	Crops	Livestock and Livestock Products	Total Crops Livestock and Livestock Products	Govern- ment Payments	Cash Income and Government Payments	Percent of All Commodities
